An Interactive Business Intelligence Dashboard for Retail, BFSI, Healthcare & Marketing Analytics

ABOUT THE PROJECT

Multi-Domain Business Analytics Dashboard is an end-to-end data analytics project developed using Microsoft SQL Server and Power BI to explore business performance across four key domains: Retail, Banking and Financial Services (BFSI), Healthcare, and Marketing.

The project uses SQL to extract, organize, and analyze data through 15 business-focused analytical questions. The analysis covers sales and profitability, customer behavior, loan performance, financial transactions, patient visits, department performance, campaign effectiveness, and customer acquisition.

The insights are presented through interactive Power BI dashboards, enabling users to explore key performance indicators (KPIs), identify trends and patterns, compare performance, and gain meaningful business insights.

PROJECT AT A GLANCE

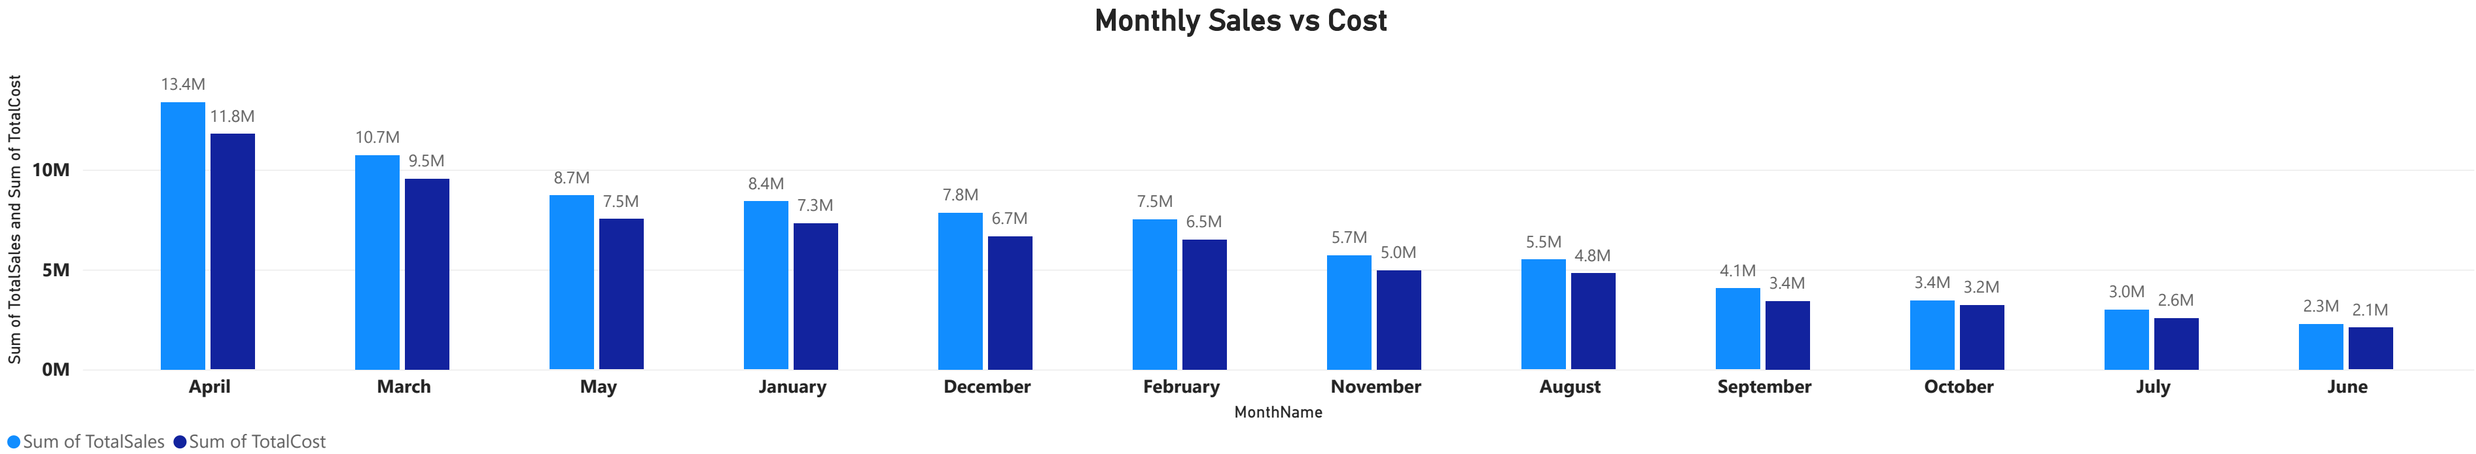

- **4** Business Domains
- **15** Business Analysis Questions
- **Technology:** SQL Server, Power BI
- **Focus:** Data Analysis, KPI Monitoring, Business Intelligence, and Data Visualization

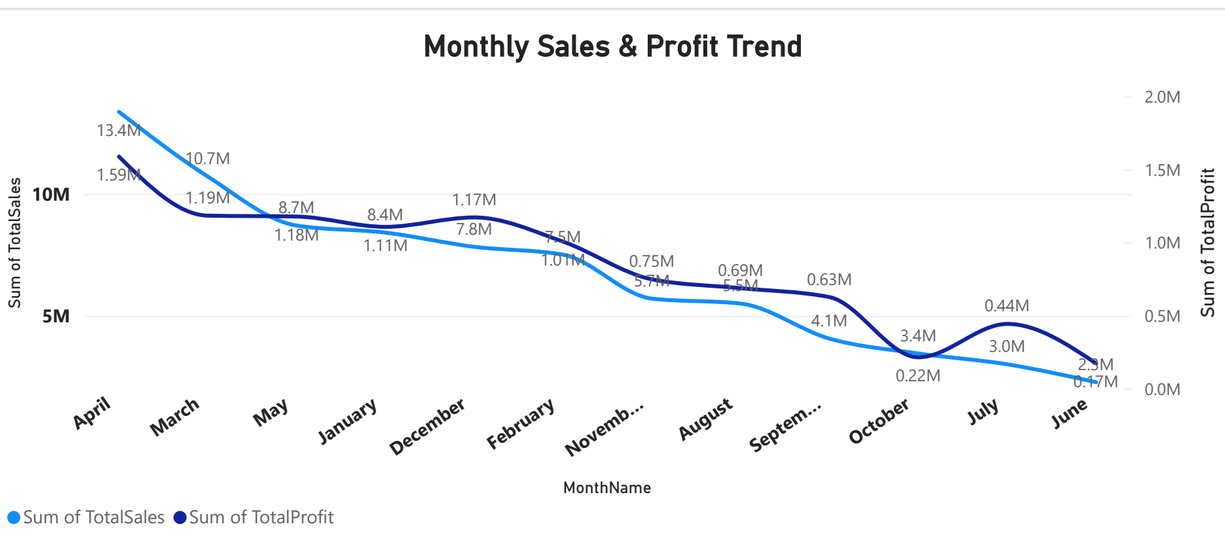

PROJECT OBJECTIVE

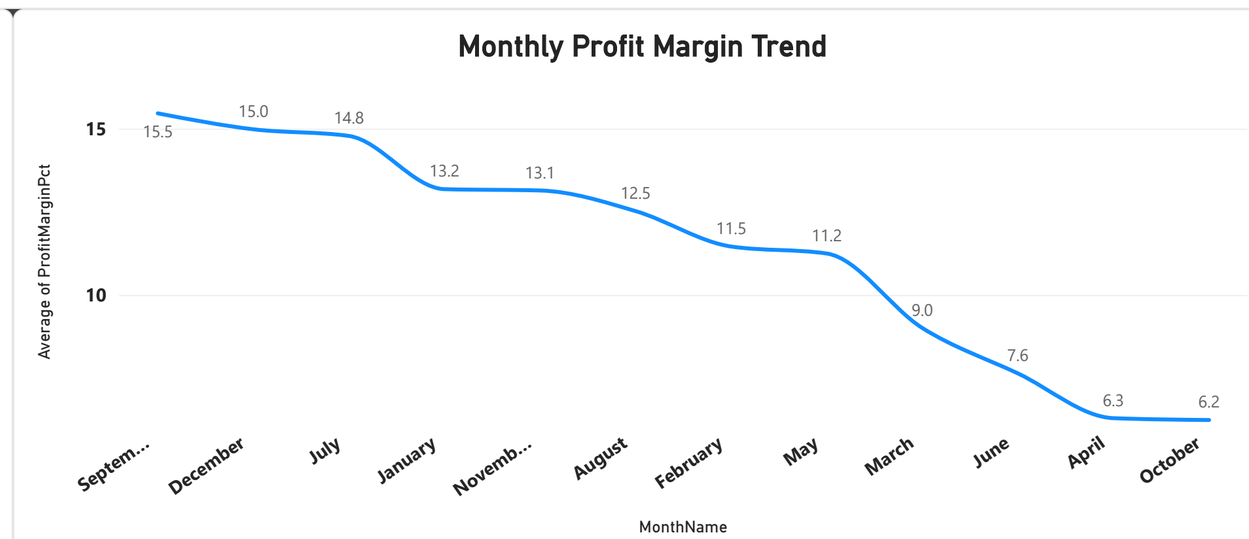

To demonstrate how SQL and Power BI can be used together to transform raw business data into meaningful insights that support data-driven decision-making.

What is the monthly sales and profit trend?

Retail Performance Analysis | 2024–2025

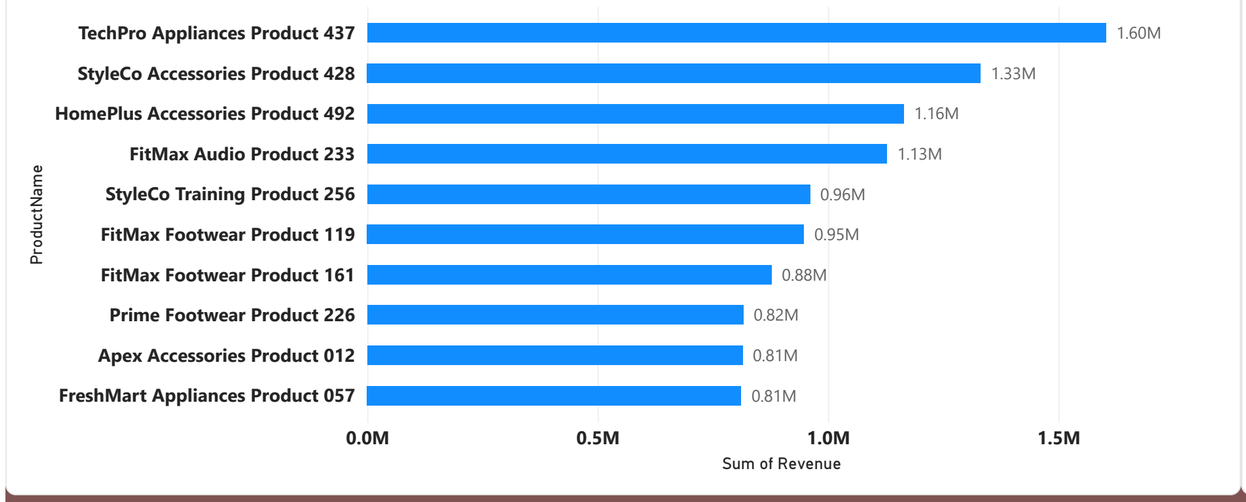

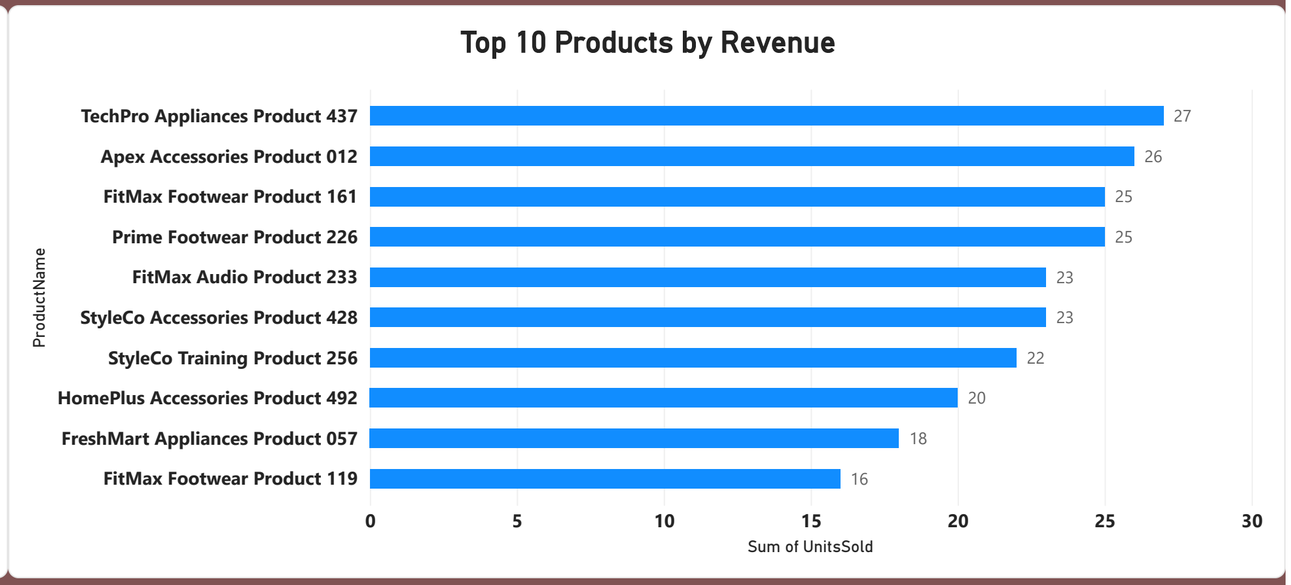

Sales and profit show month-to-month variation across 2024–2025. Months with higher sales should also be evaluated for profit margin to identify periods of stronger profitability.

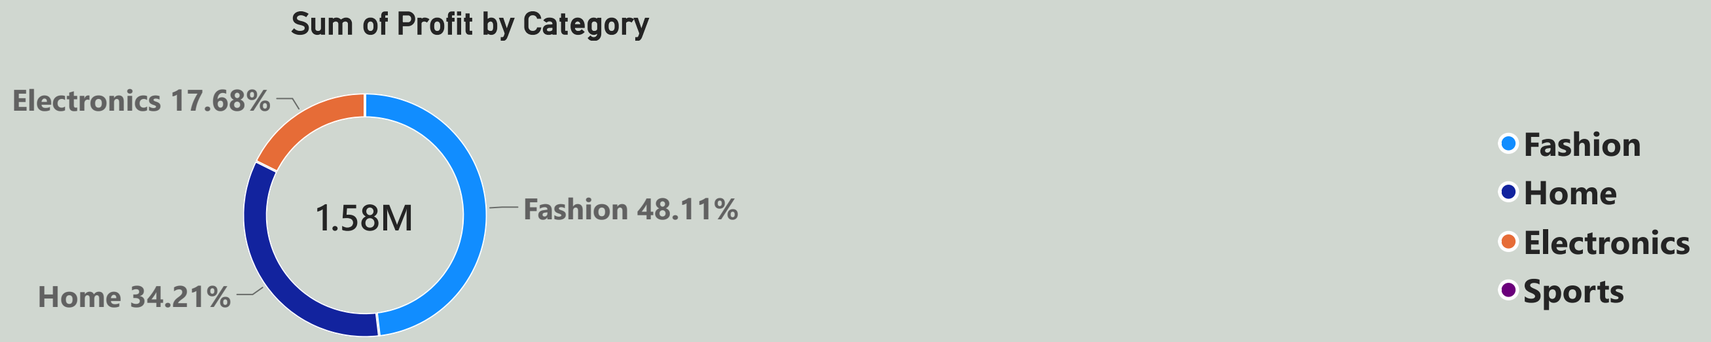

Main Page

Which products generate the highest revenue and profit?

Retail Product Performance

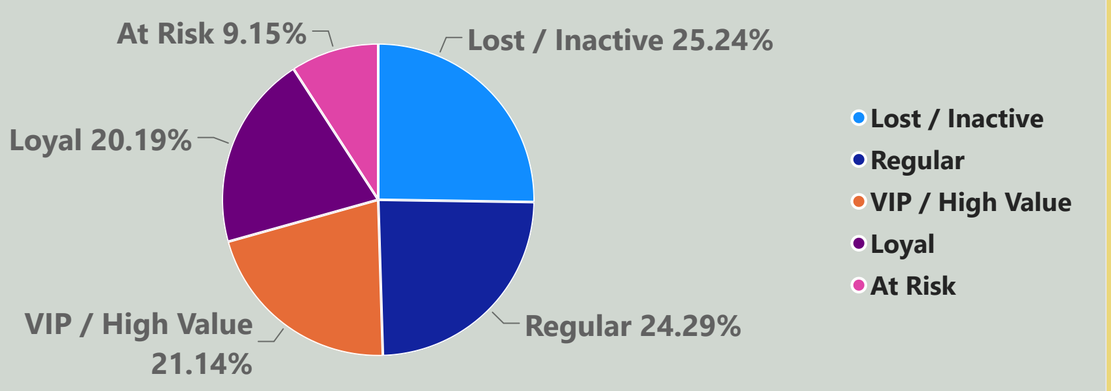

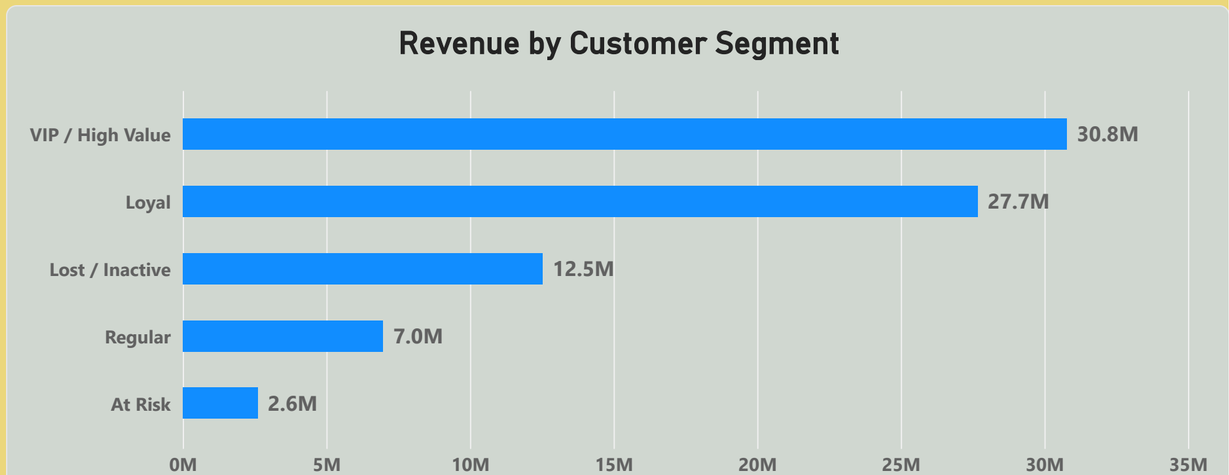

Top products contribute differently to revenue, profit, and sales volume. Comparing these metrics helps identify products that generate strong sales while maintaining healthy profitability.

Main Page

How can customers be segmented based on purchasing behavior?

Customer RFM Analysis

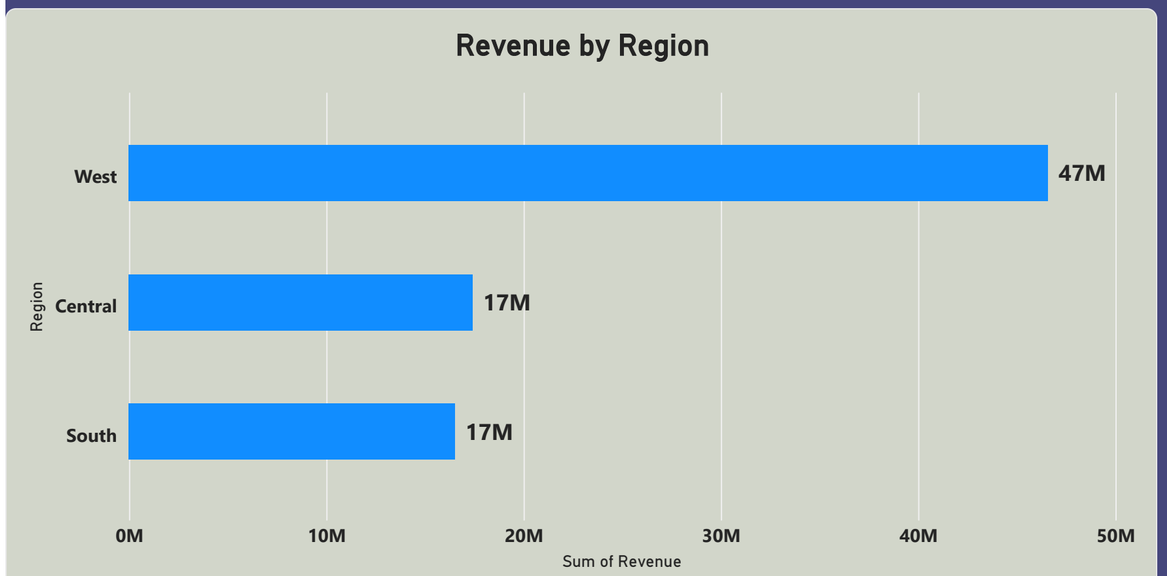

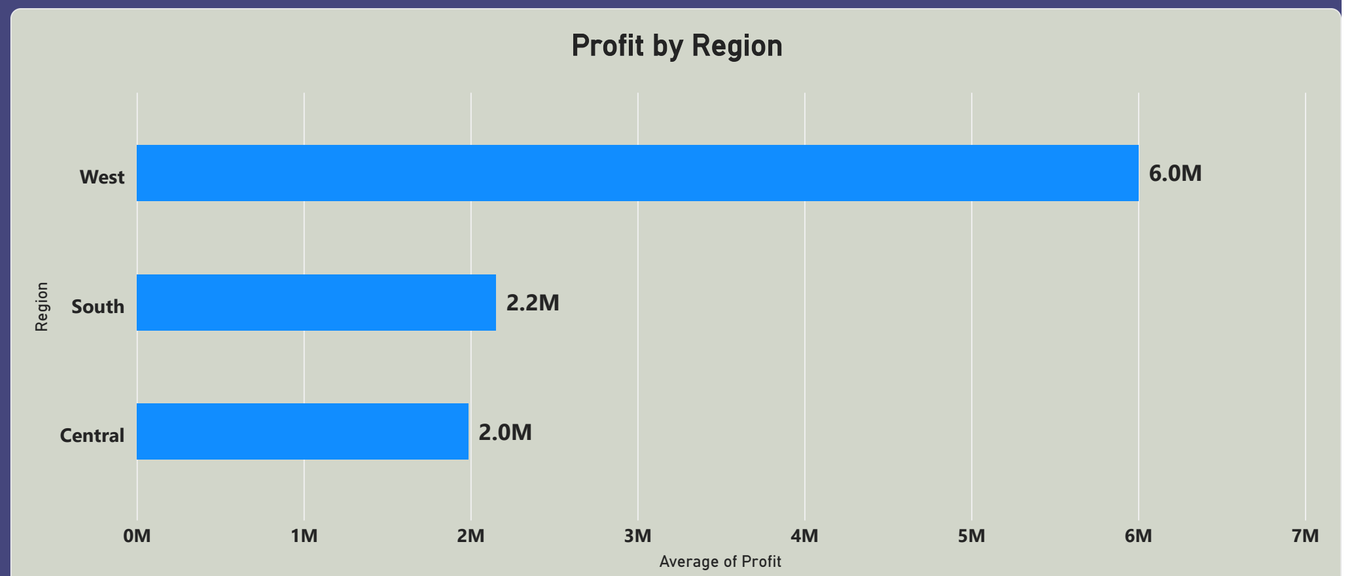

Customer segments show differences in purchasing behavior and value. High-value customers should be retained, while at-risk segments can be targeted through focused engagement strategies.

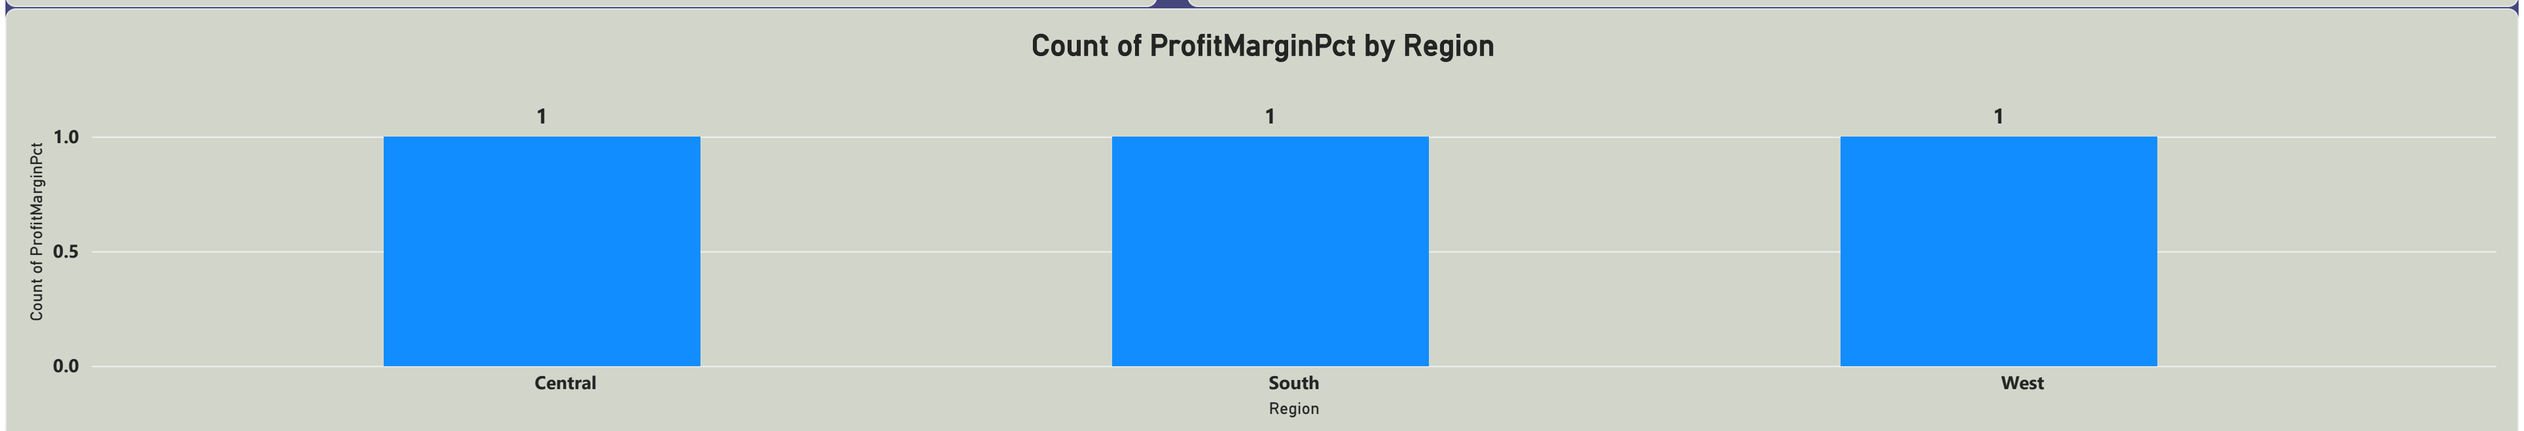

Main Page

Which regions perform best in terms of revenue and profit?

Regional Retail Performance

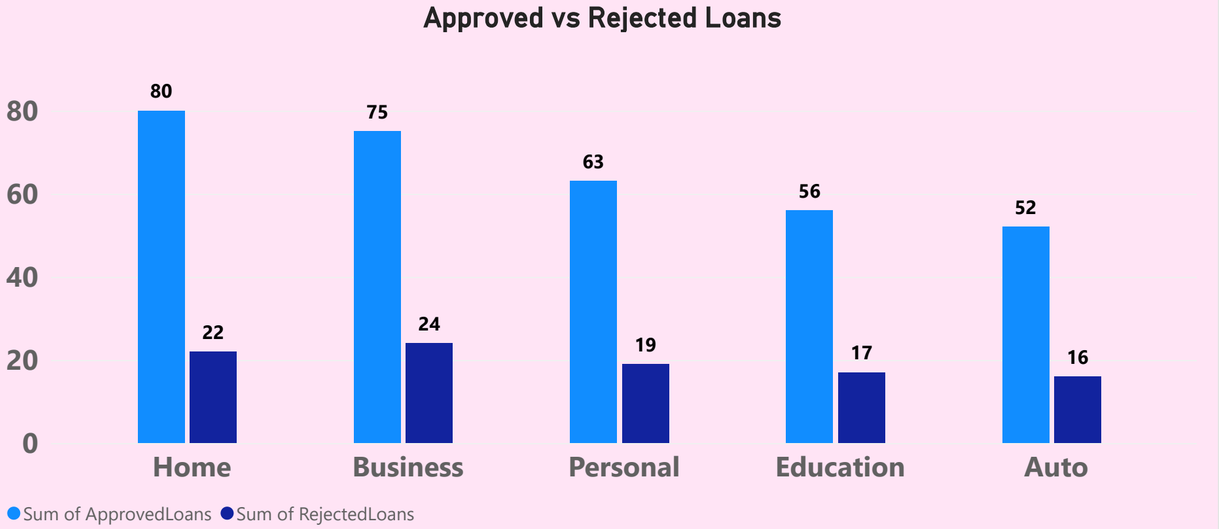

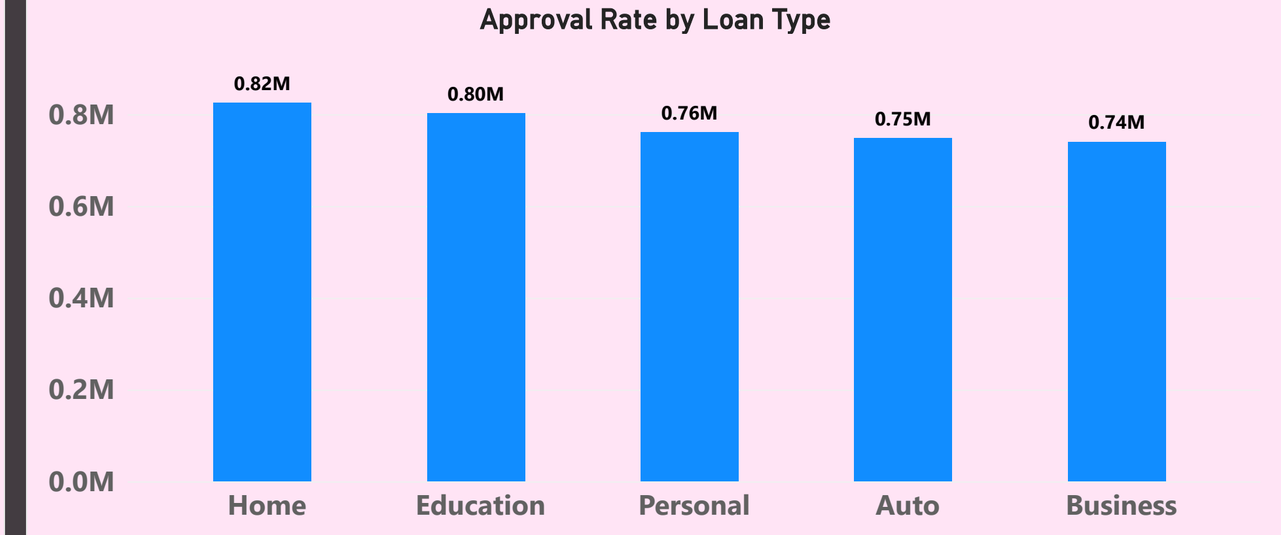

Regional performance varies across revenue and profitability. Strong-performing regions can provide benchmarks, while weaker regions may require closer evaluation of demand and cost factors

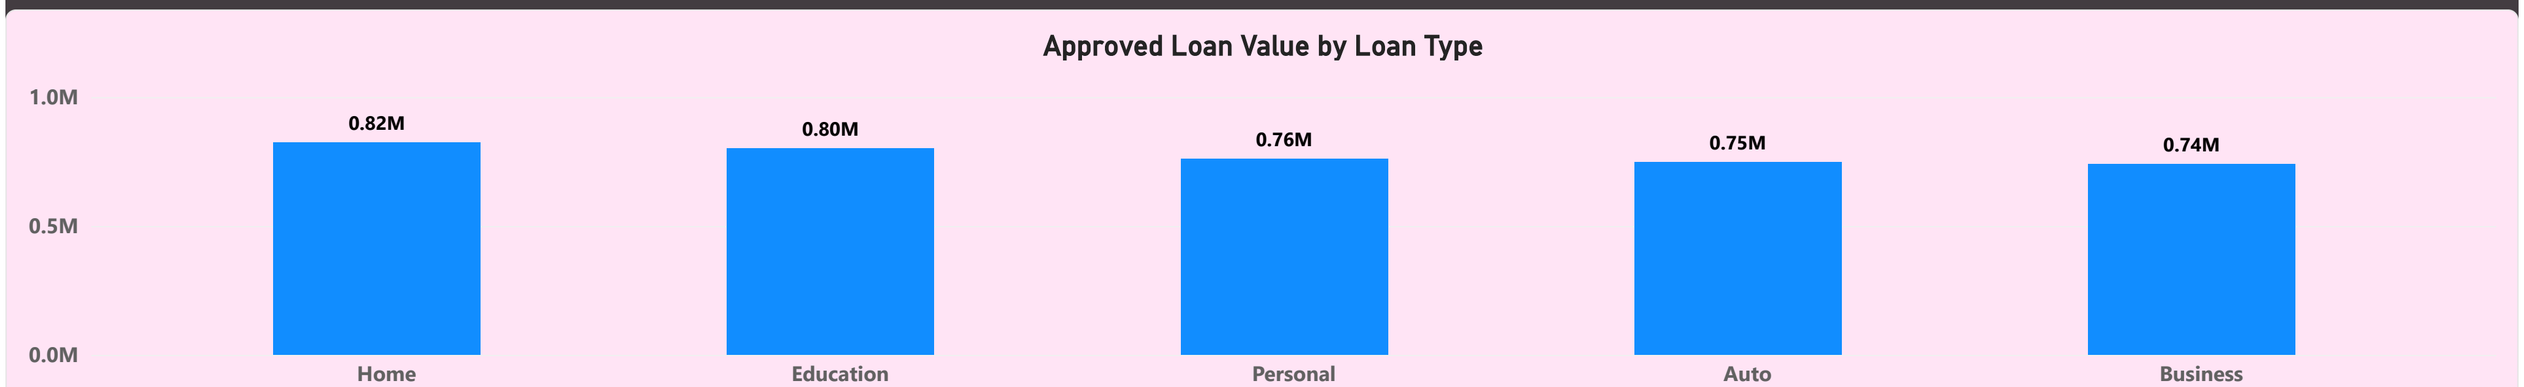

Main Page

What is the loan approval rate across different loan types?

BFSI Loan Approval Analysis

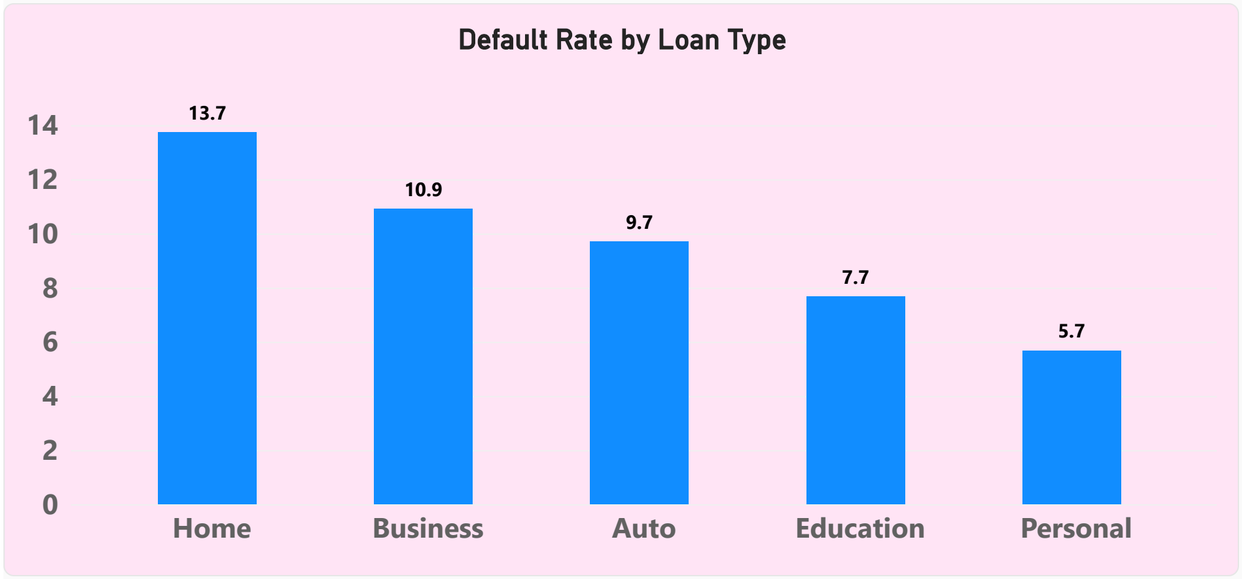

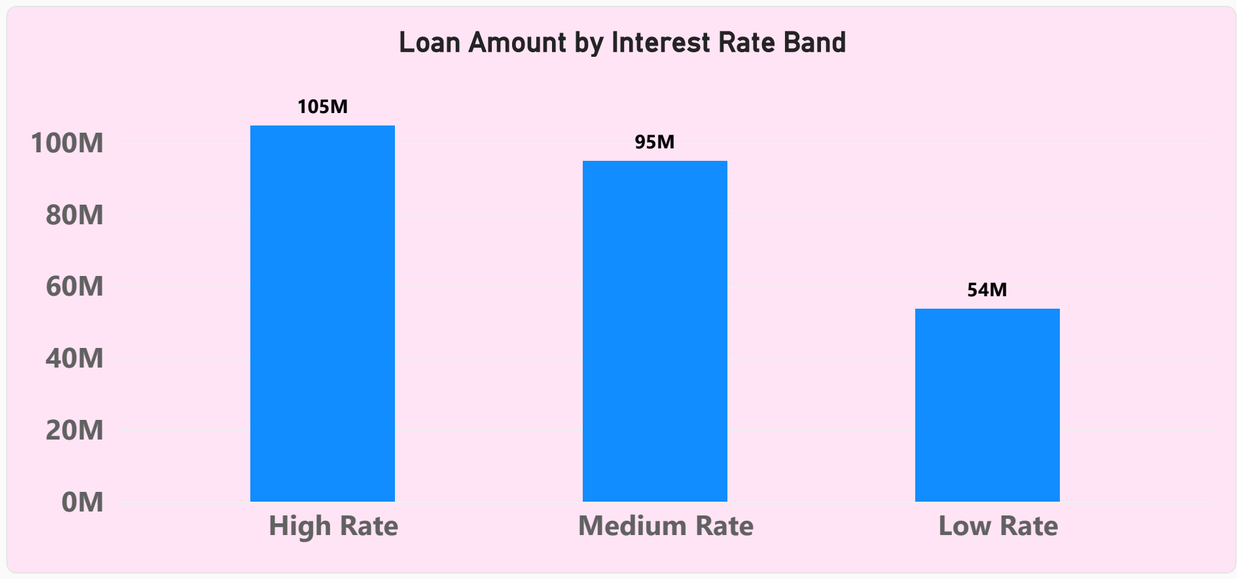

Loan approval performance varies across loan types. Comparing approval rates with approved loan value helps identify lending categories with stronger acceptance and greater business contribution.

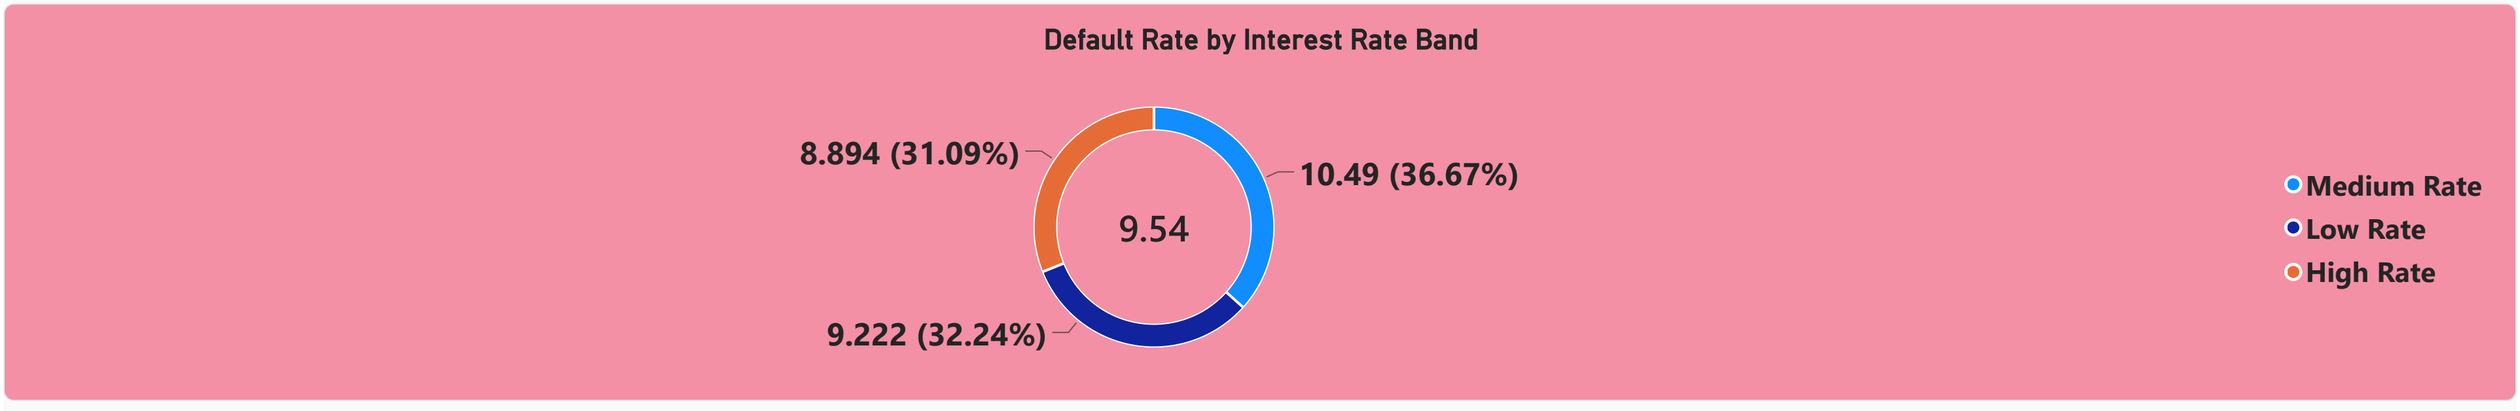

Main Page

Which loan types and interest-rate bands have higher default risk?

BFSI Credit Risk Analysis

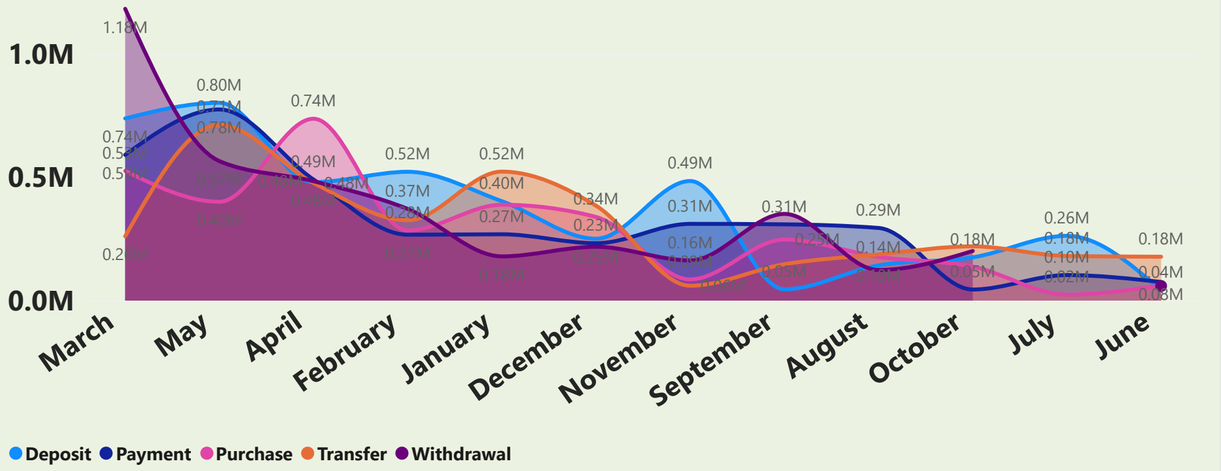

Default risk varies across loan types and interest-rate bands. Higher-risk categories should be monitored closely to control potential credit losses while maintaining appropriate lending opportunities.

Main Page

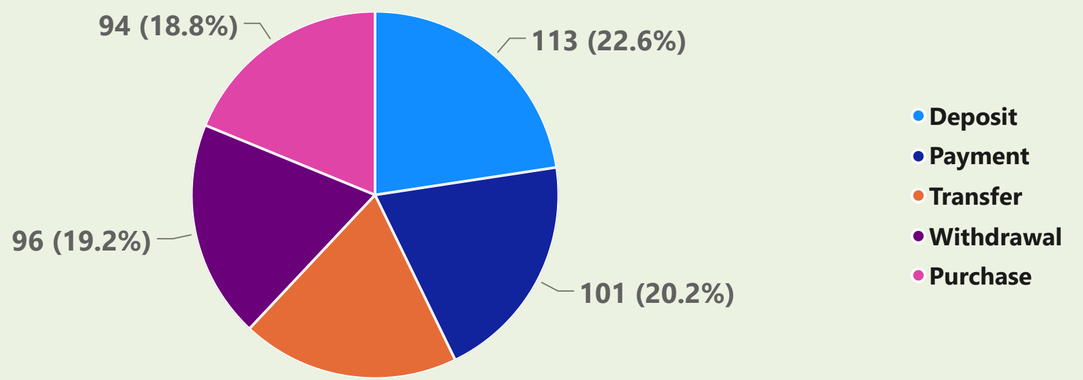

What are the major transaction trends by type and status?

BFSI Transaction Analysis

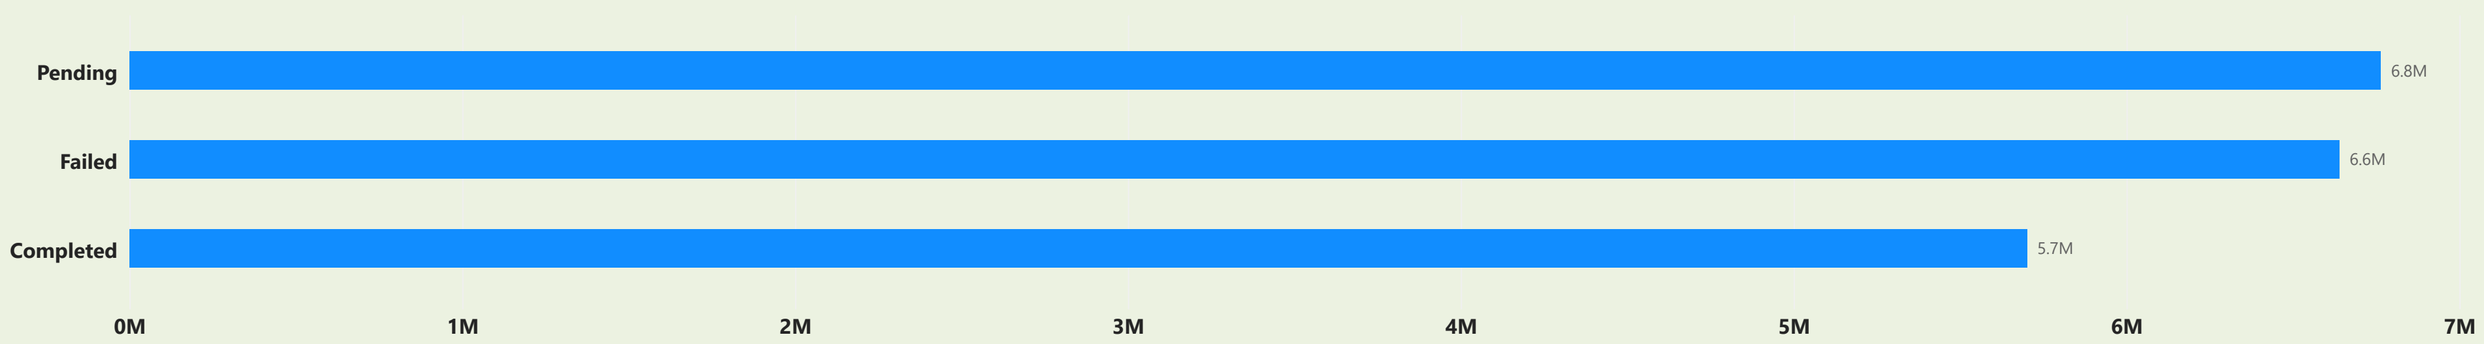

Transaction Value Trend

Transaction Count by Type

Transaction Value by Status

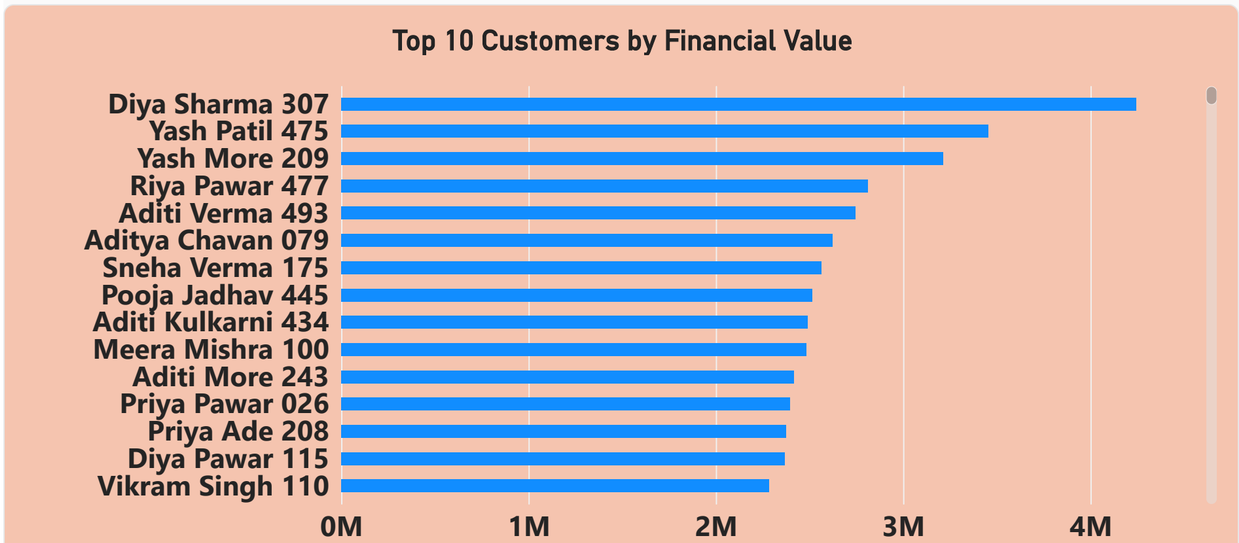

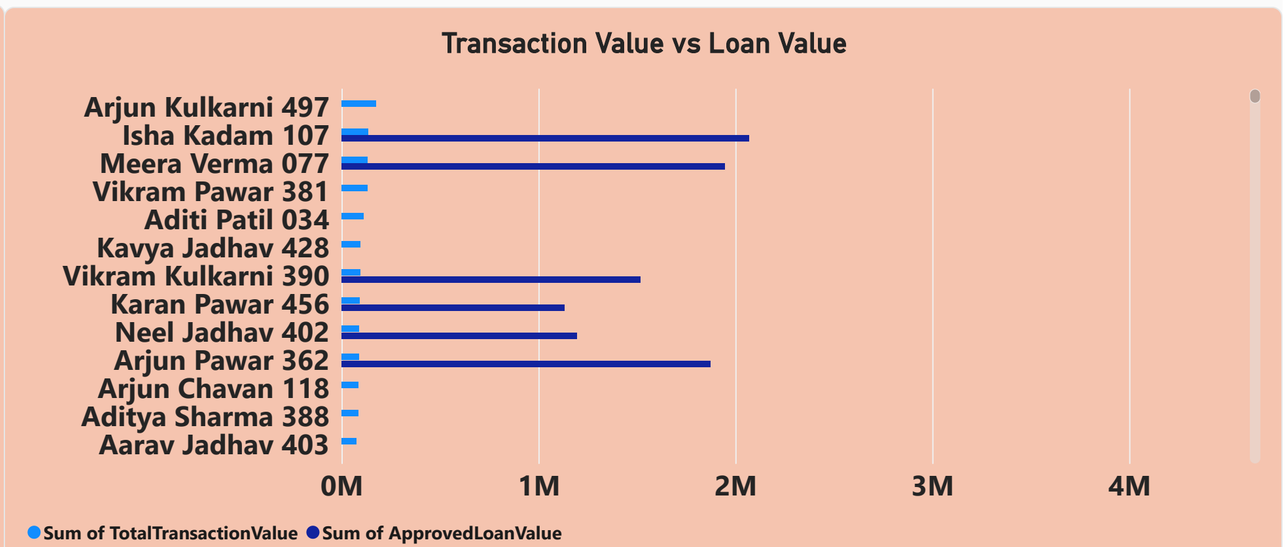

Transaction activity varies by transaction type and status across the analyzed period. Identifying high-volume and high-value transaction categories can help improve monitoring and operational efficiency.

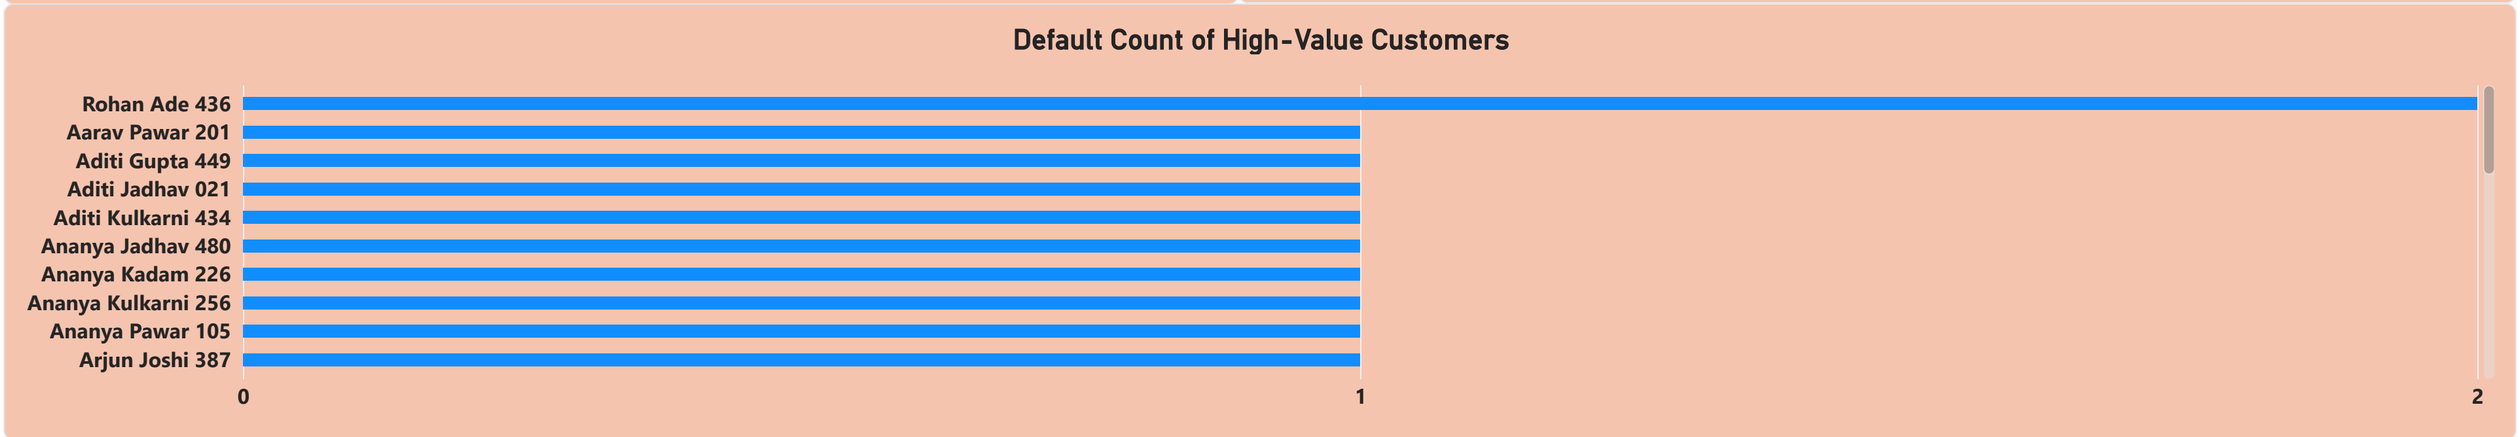

Main Page

Which customers have the highest overall financial value?

Customer Financial Value Analysis

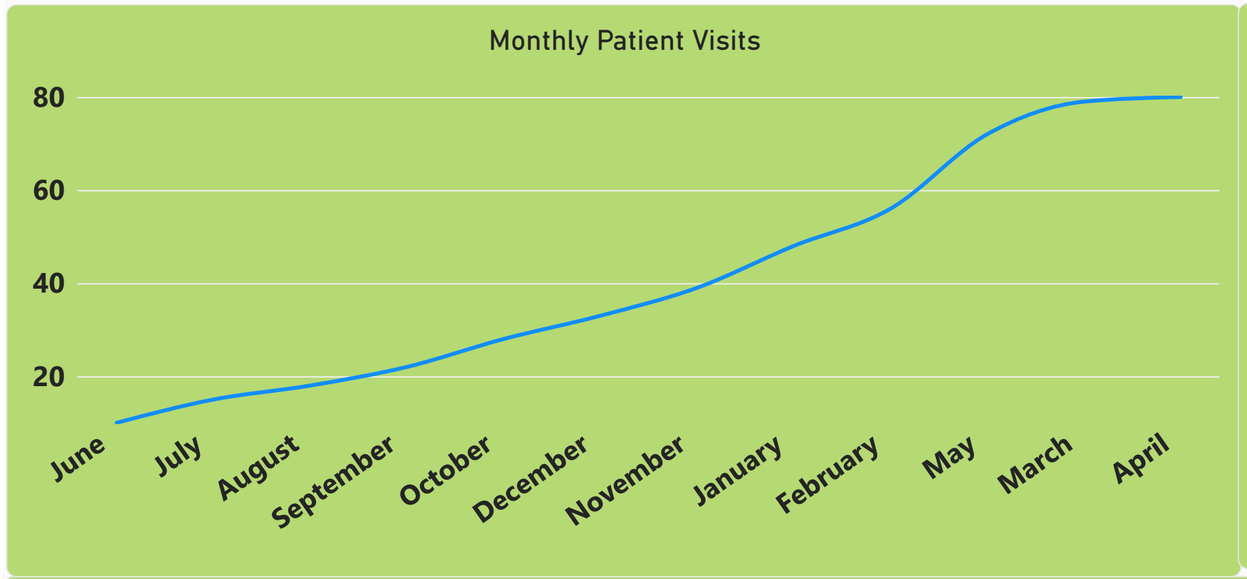

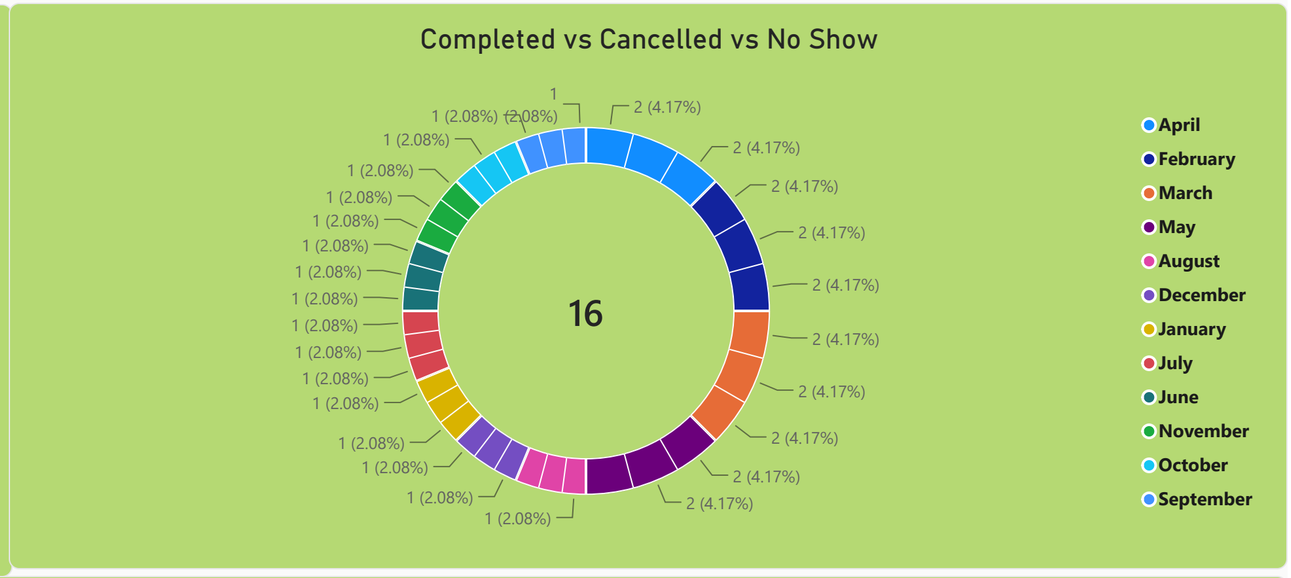

Financial value varies significantly across customers, with a small group contributing higher transaction and loan values. High-value customers should be prioritized for relationship management while customers with default exposure should be

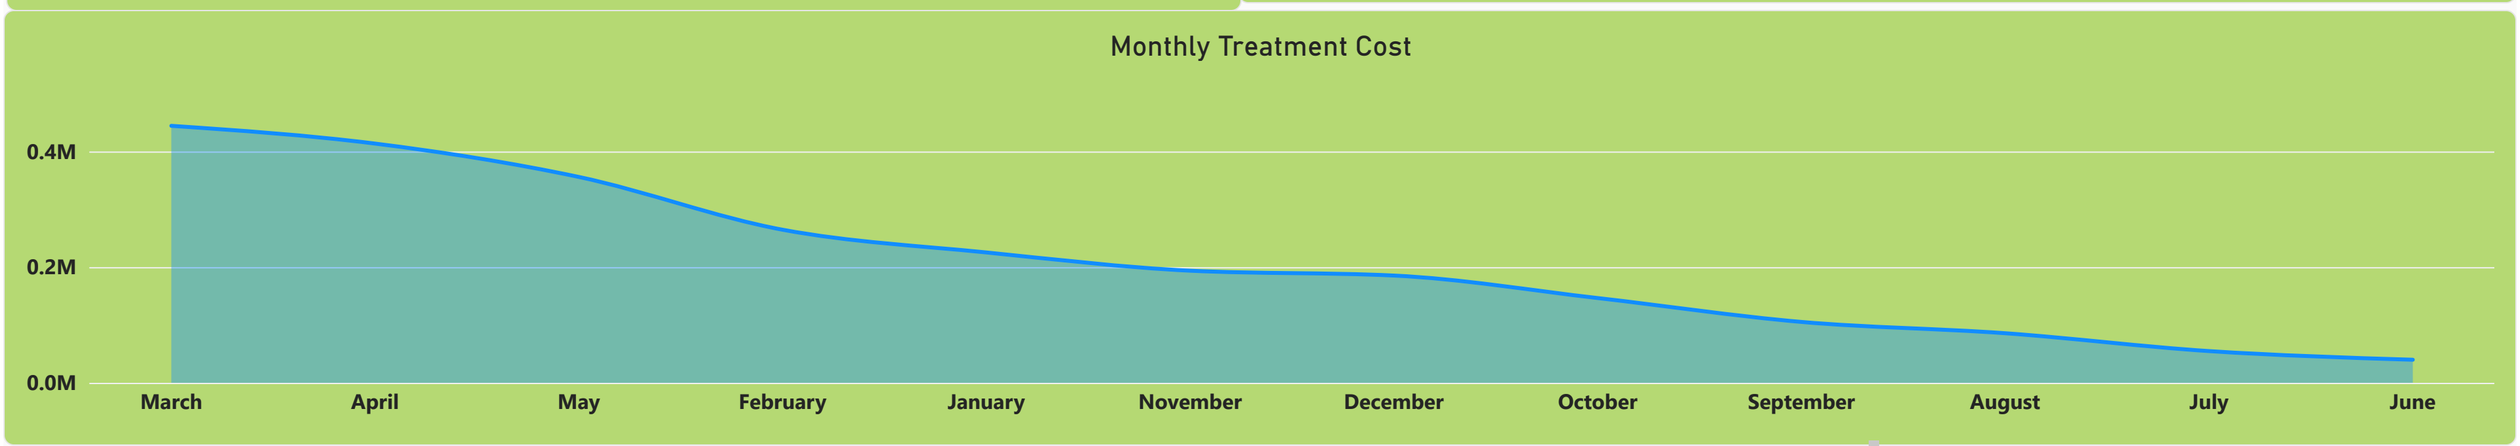

Main Page

What is the monthly patient visit trend?

Healthcare Visit Analysis

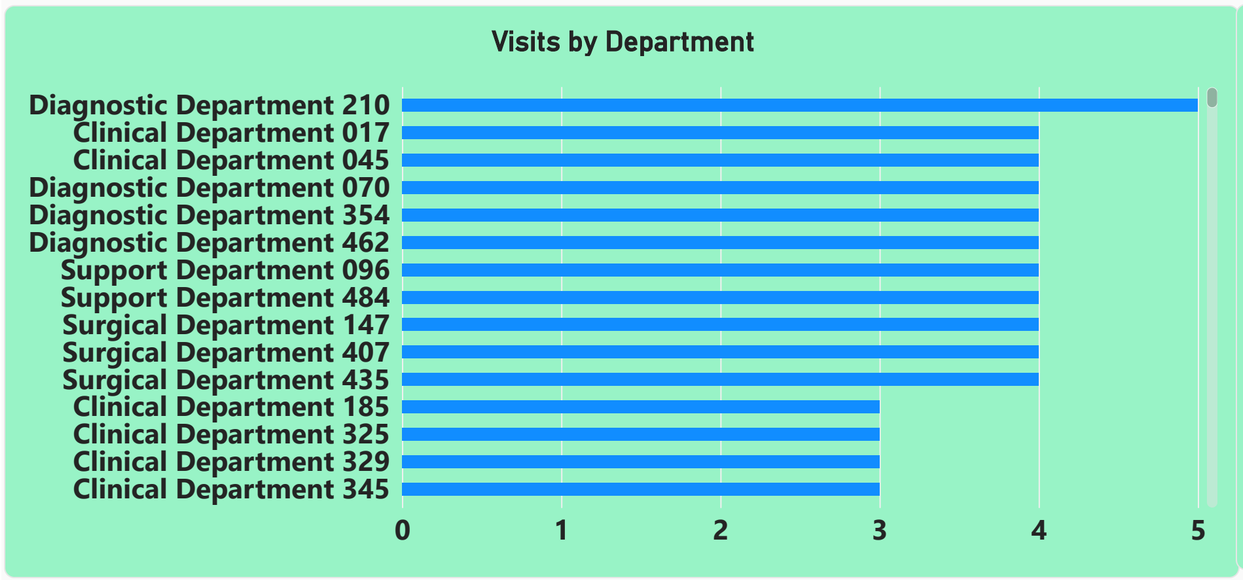

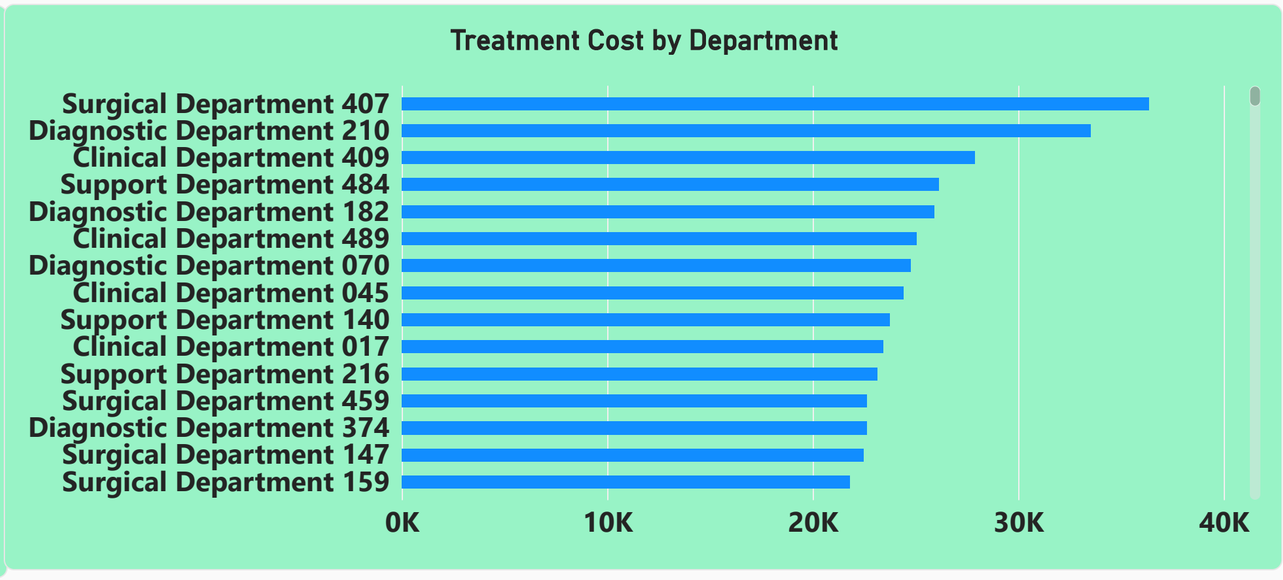

Patient visits fluctuate across the months, with some periods showing higher healthcare activity than others. Completed visits represent the core of service utilization, while cancellations and no-shows highlight opportunities to improve

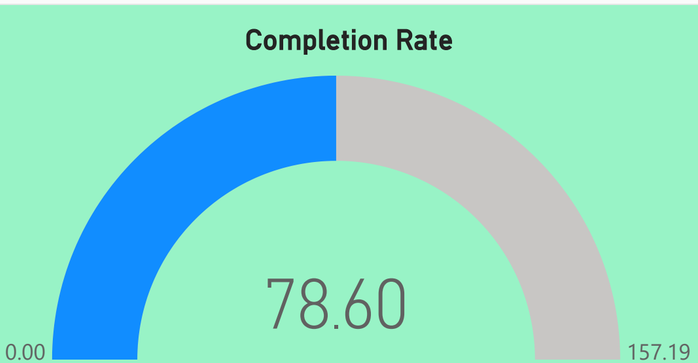

Main Page

Which healthcare departments perform best?

Healthcare Department Performance

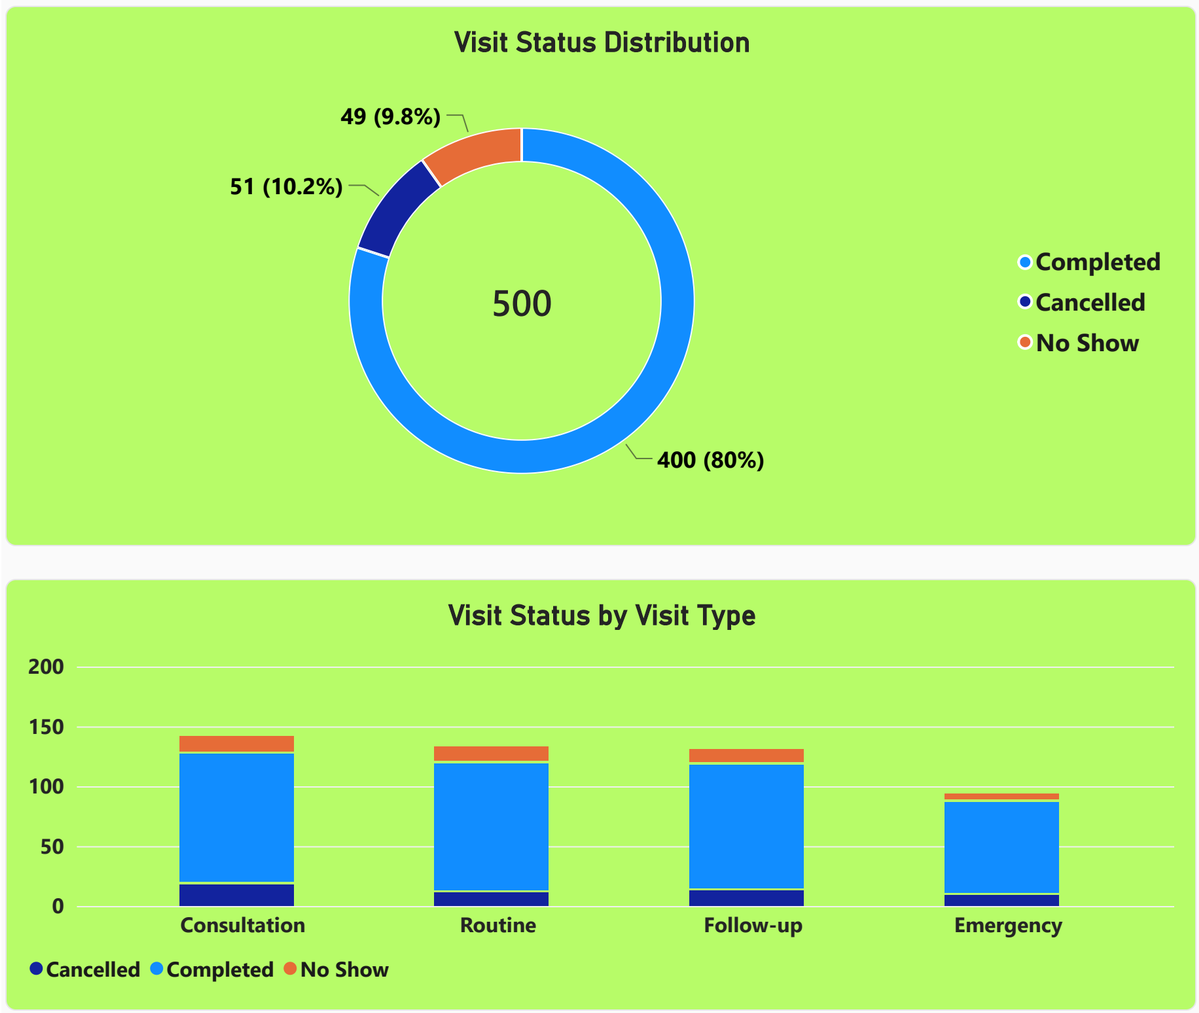

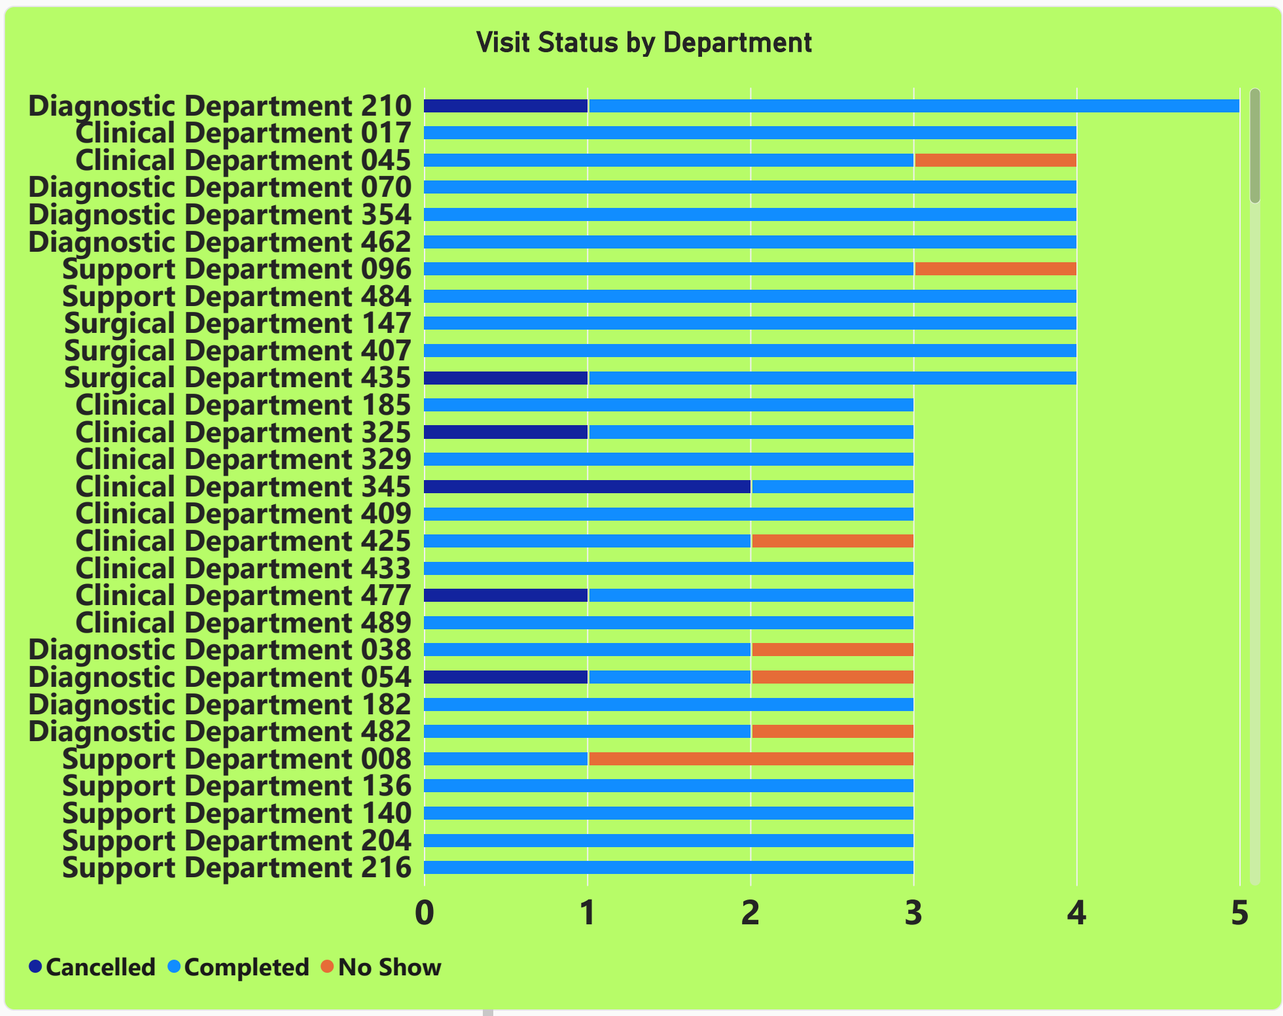

Healthcare departments differ in visit volume, treatment cost, and completion rate. Comparing these measures helps identify high-demand departments and areas where operational efficiency can be improved.

Main Page

What is the distribution of completed, cancelled, and no-show visits?

Healthcare Visit Status Analysis

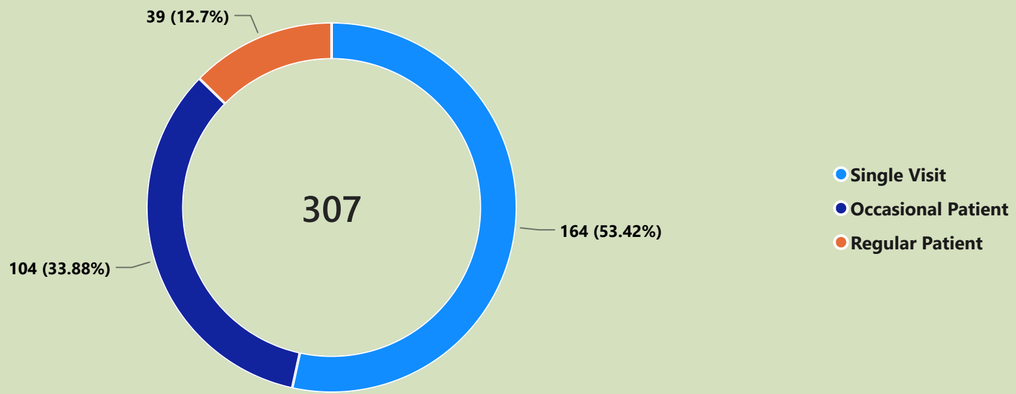

Visit statuses differ in completion, cancellation, and pending rates. Comparing these measures helps identify appointment patterns and areas where scheduling efficiency can be improved.

Main Page

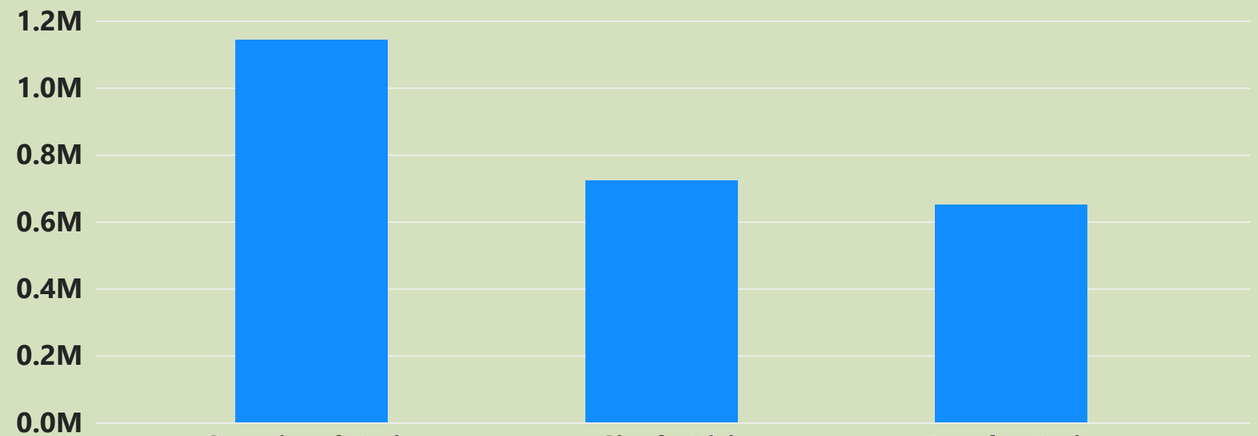

How can patients be segmented based on healthcare usage?

Patient Behavior Analysis

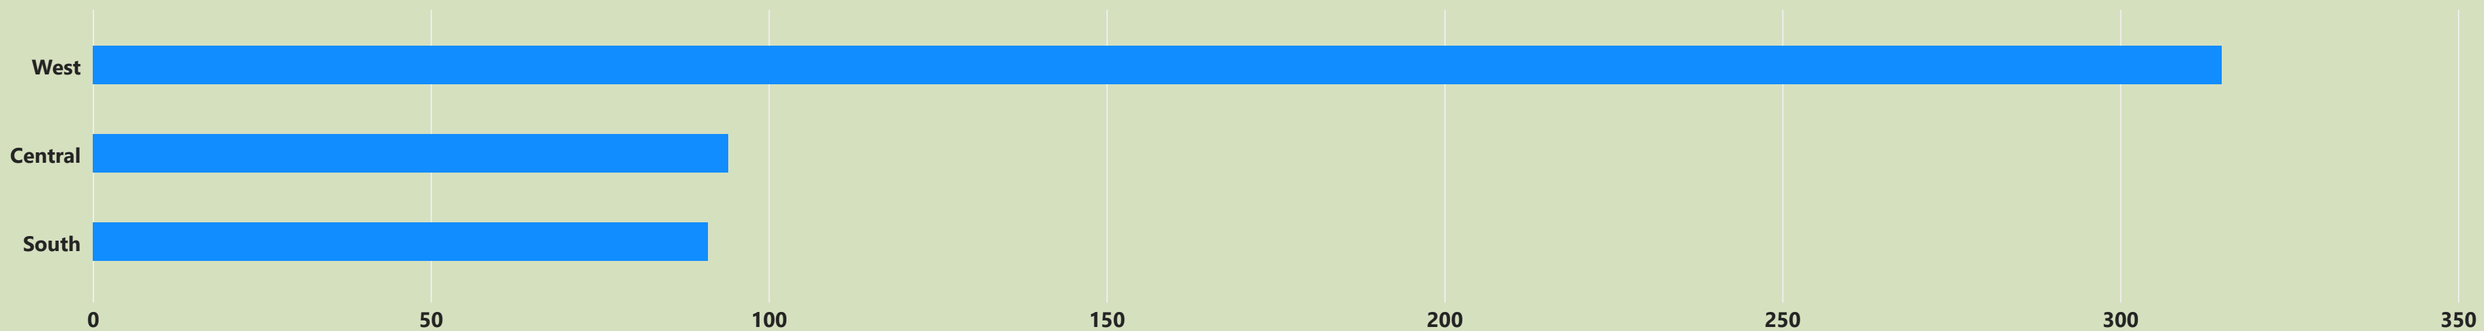

Patient Segment Distribution

Treatment Cost by Patient Segment

Visit Frequency by Patient Segment

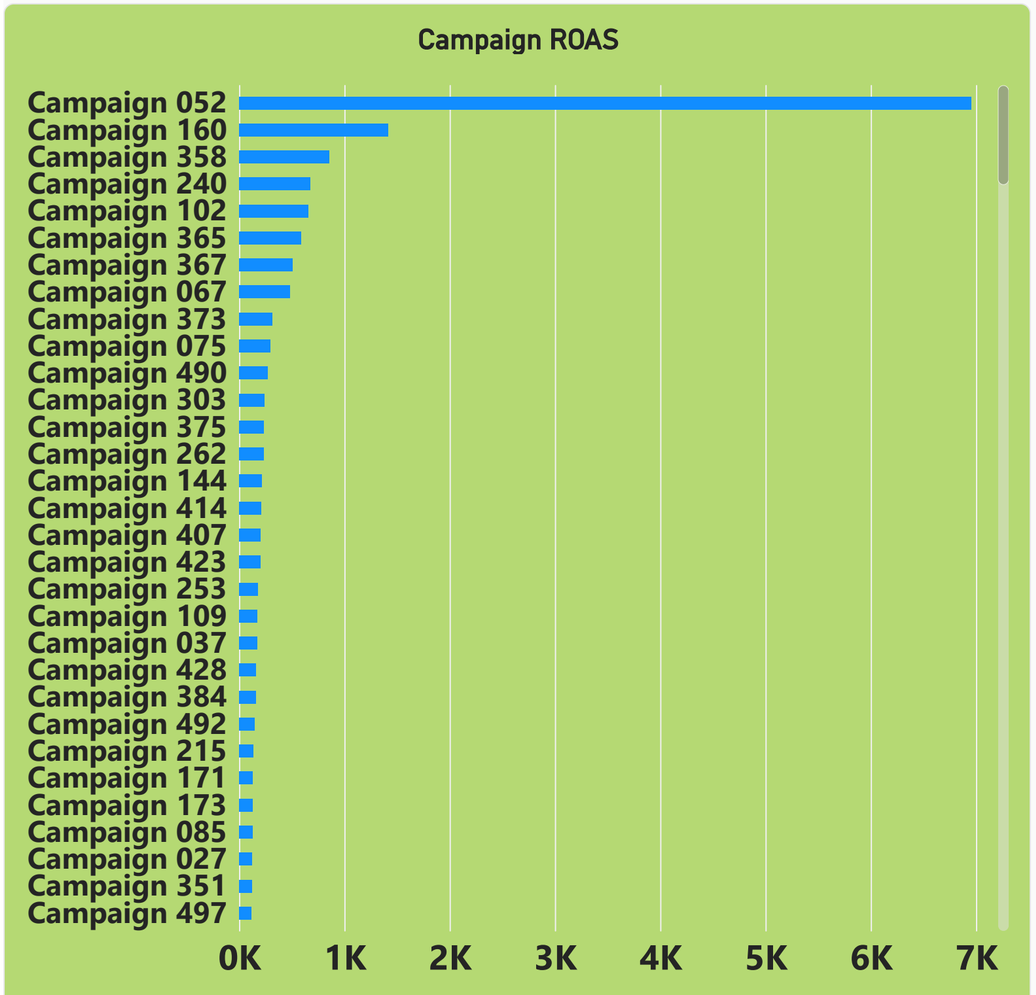

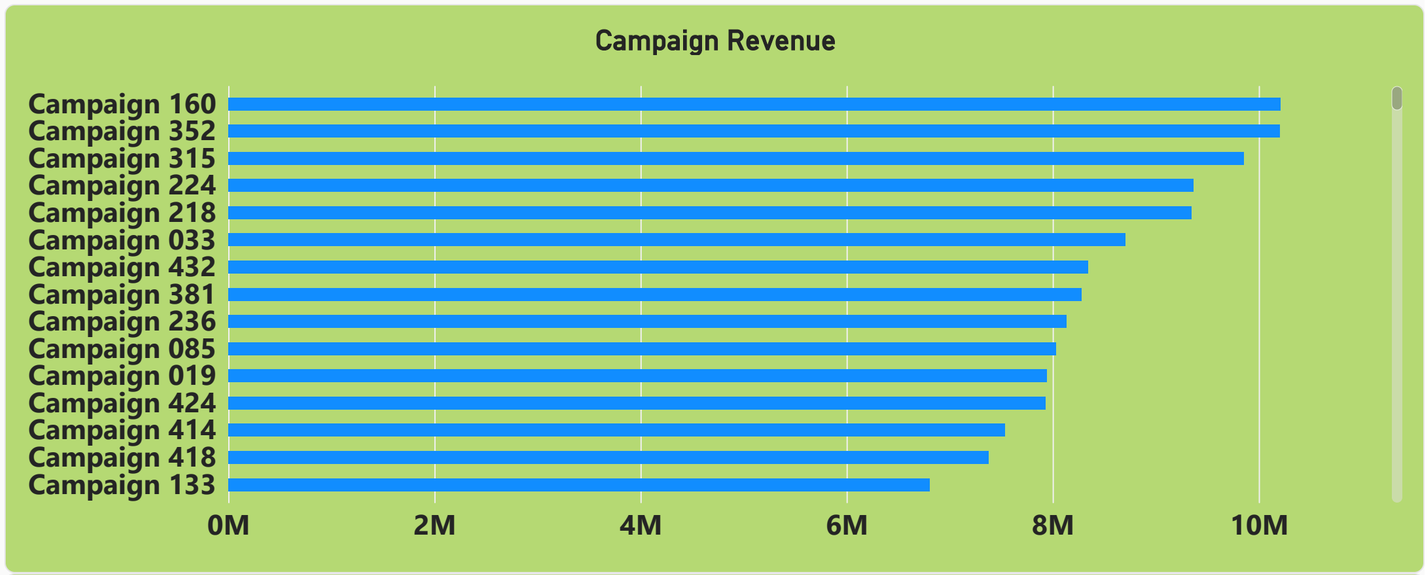

Patient segments differ in visit frequency and treatment costs. Comparing these measures helps identify healthcare usage patterns and opportunities to improve resource allocation.

Main Page

Which marketing campaigns generate the highest revenue and ROAS?

Marketing Campaign Performance

Top 10 Campaign Spend vs Revenue

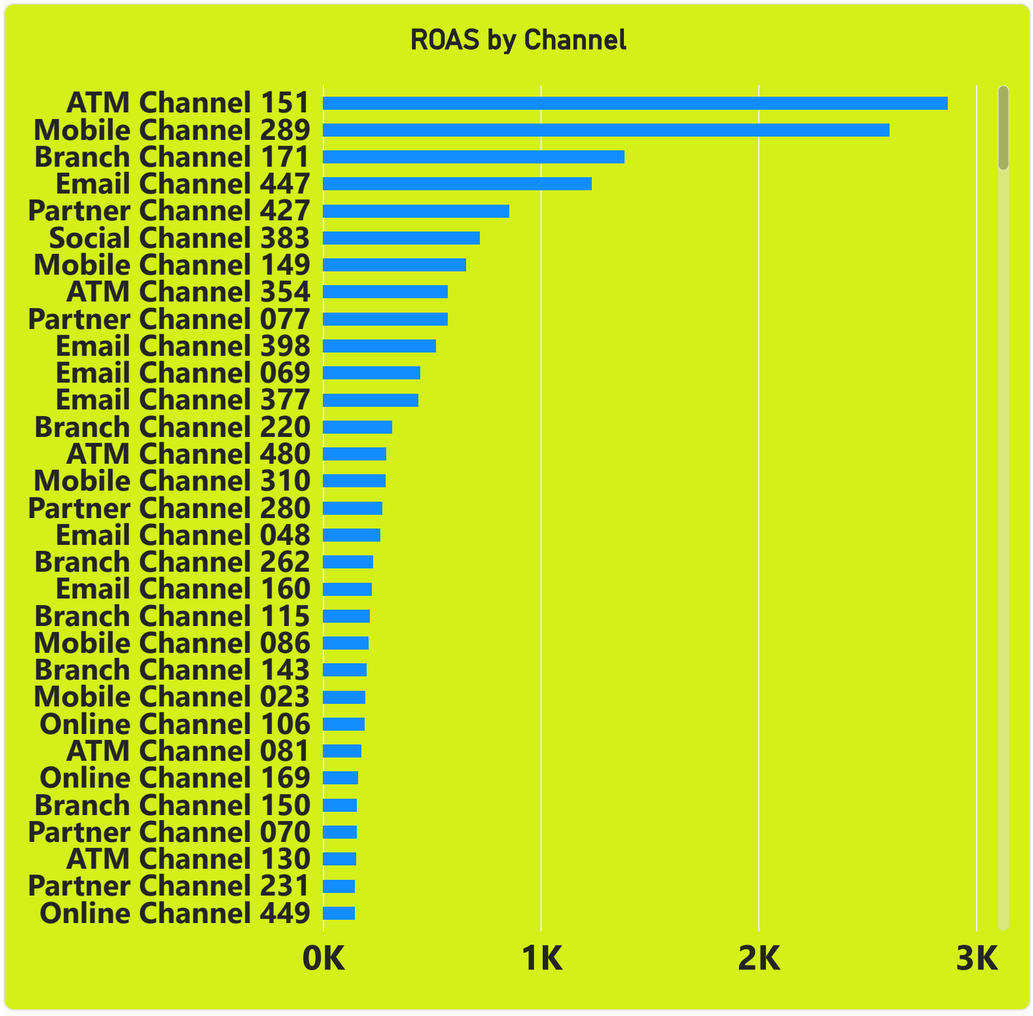

CampaignName	Sum of Spend	Sum of Revenue
Campaign 352	182,064.17	10,203,626.50
Campaign 432	159,155.03	8,342,281.21
Campaign 224	114,987.78	9,364,468.44
Campaign 315	93,239.30	9,852,465.02
Campaign 218	81,106.04	9,345,898.88
Campaign 236	80,398.17	8,135,024.99
Campaign 033	74,856.41	8,706,647.23
Total	**930,930.58**	**90,467,358.99**

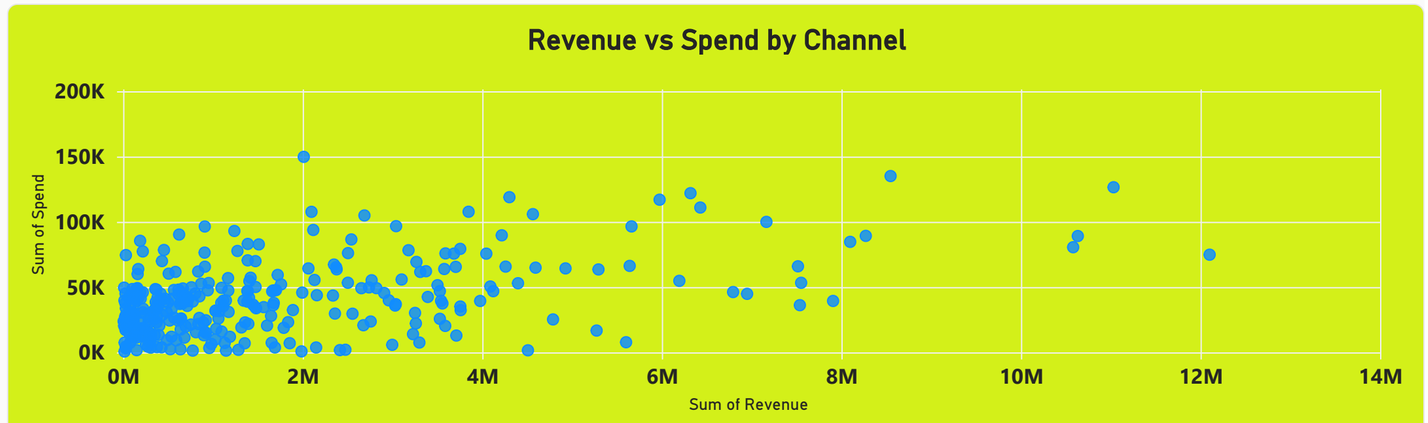

Marketing campaigns differ in revenue, spending, and return on advertising spend. Comparing these measures helps identify effective campaigns and opportunities to improve marketing performance.

Main Page

Which marketing channels provide the best ROI/ROAS?

Marketing Campaign Performance

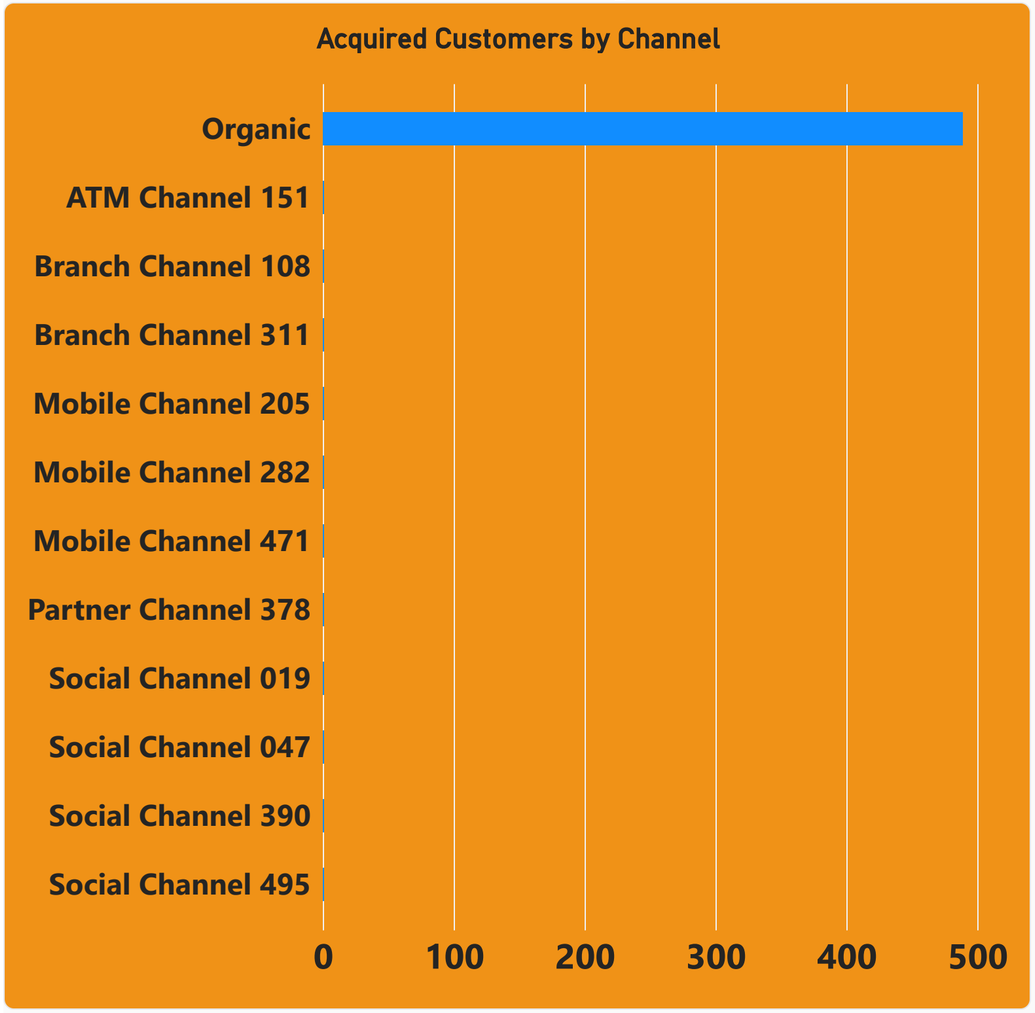

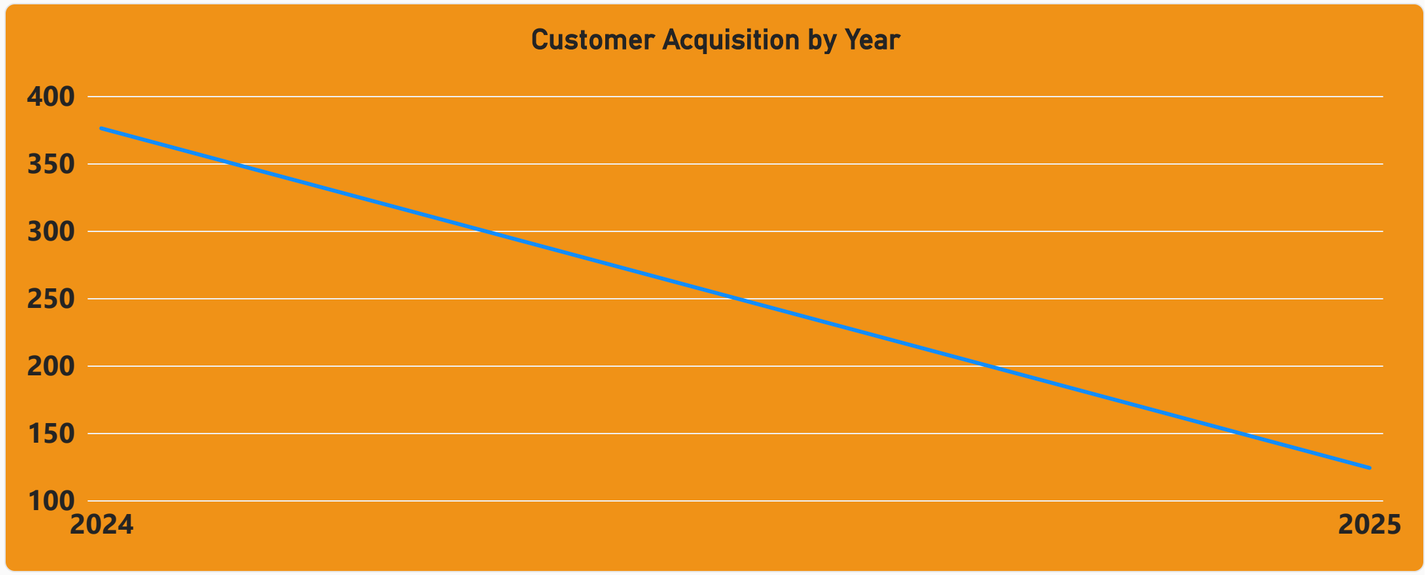

Marketing channels differ in spending, revenue, and return on investment. Comparing these measures helps identify cost-effective channels and opportunities to improve marketing budget allocation.

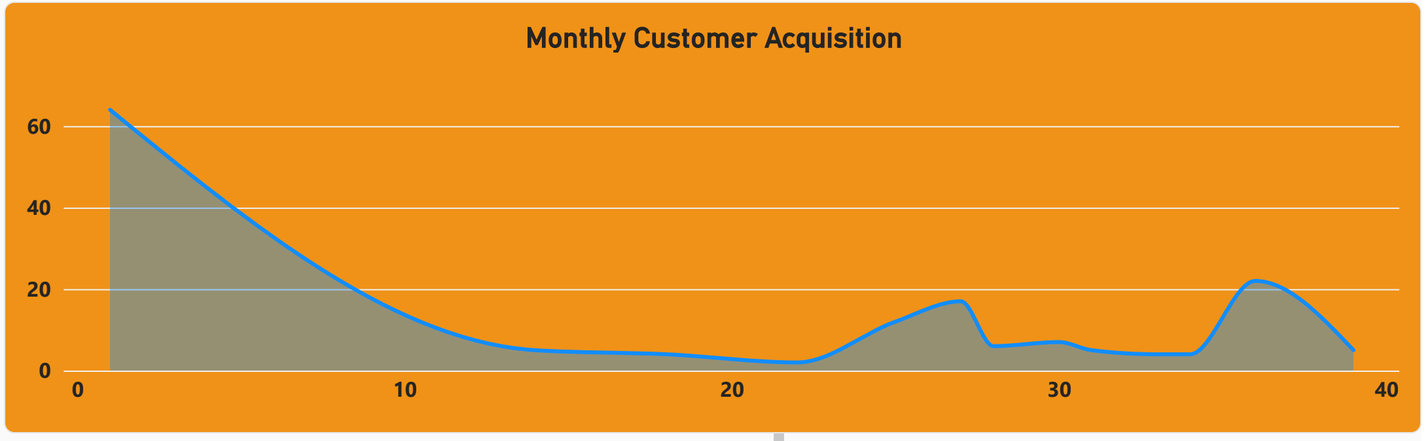

Main Page

Which channels contribute most to customer acquisition?

Customer Acquisition Analysis

Customer acquisition varies across marketing channels and time periods. Comparing these patterns helps identify customer growth trends and opportunities to improve acquisition strategies.
